Adhesive 32B

Adhesive 32B is a natural print table adhesive which holds the fabric in place while printing.

Printing

Adhesive 32B is a tan liquid which when applied to a printing blanket, holds the fabric in place while the screens apply the colors. Being based on a natural polymer, it is resistant to alkali and is easily removed by both the blanket washer and fabric washers.

Although the Adhesive 32B can be diluted with water its effectiveness quickly diminishes with dilution. As reducing the concentration also reduces the viscosity, less product will be applied and more of this will penetrate the fabric. This results in significantly less polymer being available on the blanket surface to create the “tac” necessary to hold the fabric in place.

Adhesive 32B is a natural polymer and as such is considered environmentally acceptable as compared with some synthetic alternatives.

Hand building

Adhesive 32B can also be used as a stiffening agent to build hand on fabric.

Specifications

Viscosity	~6,000cps
PH	8-10
Solids	~30%

Typical uses

Printing Vat dyes
Printing Azoic dyes
Printing Disperse dyes
Printing Acid dyes
Printing Reactive dyes
Printing Pigments

Hand building or stiffening

Characteristics

- | | |
|-------------------|------------|
| • Appearance | Tan liquid |
| • Ionic Character | Non-ionic |
| • odor | none |

Applications

- Print table adhesive
- Hand building

Packaging and Product Form

- 480lb Drums
- 2,500lb totes
