Aquaslick 100

Aquaslick 100 is a polymeric water based lubricant which provides significant lubrication at low additions.

Properties

Aquaslick 100 is a slightly viscous water clear liquid which as the name suggests is very “slick”. It can be diluted to any concentration or added to formulas to provide lubricity to water based products.

The material is non ionic and is compatible with most materials.

Aquaslick 100 will dry like water and leave virtually no residue.

Although not prone to Biological attack we recommend the use of a biocide with any water based materials.

Uses

Extrusion lubricant in Clay based materials

Lubricant for mounting tires

Lubricant for attaching hoses

Increases the distance of water jets

Characteristics

- | | |
|-------------------|----------------------------|
| • Appearance | Water clear viscous liquid |
| • Ionic Character | Non Ionic |
| • pH (1%soln) | 6-8 |

Applications

- lubricant

Environmental

- Non toxic
- Low

Packaging and Product Form

- 400lb drums
- 2,500lb totes
